

TryHackMe Room Notes Template

Room Name

Basic Information

Item Details
----- -----
Room Name
Learning Path
Difficulty Easy / Medium / Hard
Completion Date YYYY-MM-DD
Platform TryHackMe

Objective

Write 2-3 lines about the goal of this room.

Example:

Learn basic Nmap scanning techniques and service enumeration.

Topics Covered

- Topic 1
- Topic 2
- Topic 3
- Topic 4

Tools Used

Tool Purpose

```
|-----|-----|
| Nmap | Port Scanning |
| Wireshark | Packet Analysis |
| Burp Suite | Web Testing |
```

Key Concepts Learned

Concept 1

Description

Example

Concept 2

Description

Example

Commands Used

Command 1

```
```bash
command here
```
```

Purpose:

Explain why this command is used.

Result:

Explain what output means.

Command 2

```
```bash
command here
```
```

Purpose:

Explain purpose.

Result:

Explain result.

Lab Activities

Task 1

What was done?

Result:

Task 2

What was done?

Result:

Important Findings

- Finding 1
- Finding 2
- Finding 3

Screenshots

Challenges Faced

- Challenge 1
- Challenge 2

How solved:

Key Takeaways

- Lesson 1
- Lesson 2
- Lesson 3

Skills Gained

- Linux
- Networking
- Enumeration
- Web Security

MITRE ATT&CK Mapping (Optional)

| Technique | Description |
|-----------|---------------------------|
| ----- | ----- |
| T1046 | Network Service Discovery |

References

- TryHackMe Room
- Official Documentation
- Other Resources

Personal Notes

Write anything important for future revision.

Example (Nmap Room)

Nmap

Basic Information

| Item | Details |
|-----------------|-----------------------|
| Room Name | Nmap |
| Learning Path | Jr Penetration Tester |
| Difficulty | Easy |
| Completion Date | 2026-08-02 |
| Platform | TryHackMe |

Objective

Learn host discovery, port scanning and service enumeration using Nmap.

Topics Covered

- Host Discovery
- Port Scanning
- TCP Scan
- UDP Scan
- Service Enumeration

Tools Used

| Tool | Purpose |
|------|------------------|
| Nmap | Network Scanning |

Commands Used

Host Discovery

```
```bash  
nmap 192.168.1.10
```
```

Purpose:

Check if target is alive.

Result:

Host detected successfully.

Service Enumeration

```
```bash  
nmap -sV 192.168.1.10
```
```

Purpose:

Identify running services.

Result:

FTP, SSH and HTTP services identified.

Key Takeaways

- Nmap is a network enumeration tool.
- Service detection is important.

- Open ports reveal attack surface.

Skills Gained

- Port Scanning
- Enumeration
- Network Reconnaissance
